TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, Java, C
- **Frontend:** React.js, Angular, Redux, HTML, CSS, Sass, Figma, Adobe XD
- **Backend:** Node.js, Express.js, FastAPI, SQLAlchemy, Alembic
- **Databases:** MySQL, PostgreSQL, MongoDB
- **DevOps & Cloud:** Docker, AWS (S3, CloudWatch, ECS), GitLab CI/CD, Git
- **Testing:** Pytest, Cypress, Playwright, Jasmine

WORK EXPERIENCE

SIEMENS

Software Developer - Working Student

Berlin, Germany
JULY 2024 – Present

- Led frontend development of a Factory Orders Quality Assurance application adopted by 10 SIEMENS factories globally, including 2 in Germany.
- Refactored a frontend codebase into a domain-driven architecture, improving maintainability through better state management. Upgraded libraries, cleaned up deprecated code using an internal MCP server.
- Built frontend and contributed to backend development for a worker guidance document management system for factory machines, including dashboards for managing machine and department hierarchies, improving access to operating instructions, safety documentation, navigation, and data accessibility.
- Implemented multiprocessing in a FastAPI server wrapping a Factory Inventory Simulation Model, enabling parallel simulation runs across multiple CPU cores and achieving a 4x speedup in execution time.
- Optimized handling of large simulation-generated datasets through Parquet file storage and chunked uploads/reads, and built visualizations that helped data scientists interpret and improve the model.

Solana Labs

Software Engineering Fellow

USA (remote)
SEP 2022 – DEC 2022

- Selected as one of the 90 developers globally to attend the MLH fellowship program.
- During the fellowship period, I worked with Solana Labs and contributed to the main [Solana blockchain explorer](#) web application.
- Enhanced web application user experience by presenting information about inactive accounts, improved UI, resolved open-source bugs reported by the community and displayed complex nested data structures of Solana blockchain programs on the frontend.

EDUCATION

Brandenburg University of Technology

M.Sc. in Artificial Intelligence - Expected Graduation: February 2027
Coursework: Data Mining, Explainable ML, Computing at Scale with ML, Statistics

Cottbus, Germany
APR 2024 - Present

Jamia Hamdard University

B.Tech. in Computer Science Engineering
Coursework: Data Structures, Design, and Analysis of Algorithms, Operating Systems, DBMS

New Delhi, India
AUG 2019 – JUN 2023

PROJECTS

Schedule-e-Hamdard | [GitHub](#) | TypeScript, React.js, Node.js, MongoDB, Express

- A role-based class scheduling platform for staff, teachers, and students, enabling efficient class assignments and session tracking.

Mollify | [GitHub](#) | React.js, Node.js, MongoDB, Express, Socket.io, PeerJS

- A web application connecting psychiatrists with patients for home, virtual, and clinic sessions, featuring scheduling, navigation, messaging, and video communication for both parties.

AWARDS AND ACHIEVEMENTS

MLH Orientation Hackathon: My team made an NFT minting web application ([GitHub](#)) which got selected among the top 3 projects.

Solved 500+ problems on Leetcode ([Profile](#)).
